Post-Quantum Cryptography Migration Toolkit

A beginner-friendly guide to the new encryption standards that will protect us from quantum computers

No technical background needed - everything explained from scratch

Made with Python | kyber-py | dilithium-py | matplotlib

100% free and open-source

What is Encryption?

Why Quantum Computers Break Encryption

The Solution: Post-Quantum Cryptography (PQC)

Understanding PQC Through Analogies

Meet the PQC Migration Toolkit

```
+-----------------------------------------------------+
|          PQC MIGRATION TOOLKIT - MAIN MENU          |
+-----------------------------------------------------+
|  1.  ML-KEM Key Encapsulation Demo   (FIPS 203)     |
|  2.  ML-DSA Digital Signature Demo   (FIPS 204)     |
|  3.  Hybrid TLS 1.3 Handshake Demo                  |
|  4.  Certificate Migration Analysis                  |
|  5.  Performance Benchmarks + Charts                |
|  6.  Run ALL modules sequentially                   |
|  0.  Exit                                           |
+-----------------------------------------------------+
```

Module 1: ML-KEM Key Exchange

Module 2: ML-DSA Digital Signatures

Module 3: Hybrid TLS Handshake

Module 4: Certificate Migration

Module 5: Performance Benchmarks
